About Us

Bobogrup ve Plastik operates with the mission of providing innovative, high-quality, and environmentally friendly products in the plastic film and packaging solutions sector. In our state-of-the-art production facilities, we manufacture a wide range of products such as PE shrink films, greenhouse covers, stretch films, perforated bags, mulch films, and silage films, offering tailored solutions to meet the needs of various industries. With our production approach based on global standards and a customer-focused mindset, we have established ourselves as one of the leading companies in the sector.

Vision

At Bobogrup ve Plastik, we aim to be a pioneer of sustainable innovations in the plastic film and packaging sector and to become a globally recognized and trusted brand. By producing with environmental awareness, we strive to be a symbol of quality, trust, and innovation in the industry.

Mission

Bobogrup ve Plastik is committed to contributing to the success of its business partners by providing high-tech, high-quality, and environmentally friendly products. Together with our employees and partners, we prioritize creating value for a sustainable future and developing industry-leading solutions that make a difference.

The background is a vibrant blue with a glossy, liquid-like texture. It features several large, overlapping, curved shapes that resemble waves or flowing water, creating a sense of movement and depth. The lighting is soft, highlighting the curves and creating subtle gradients of blue.

Keep it Safe

With our reliable and strong packaging, you can have peace of mind knowing your valuables are safe and secure.

Perforated Bags

Perforated bags, also referred to as pull-off bags, can be created in a desired size and color using premium materials. Thanks to perforated lines that are strategically placed at regular intervals, these bags are simple to use and have consistent lengths every time they are opened.

By utilizing perforated bags, you can save time and labor while safeguarding your products from the detrimental effects of dust, rain, and sunlight. These bags can be personalized to your preferences, including the option to print on them or not, and can be produced in a range of sizes and with various features.

Stretch Film

Stretch film has seen a surge in popularity in recent years due to its cost-saving benefits for companies in the world. With its flexible nature, stretch film is able to securely wrap items, making it an ideal choice for businesses that transport palletized products.

Additionally, stretch film helps to prevent products from getting dusty during transportation by reducing air contact.

Strong Shield

Our cling film provides long-lasting protection for your food and other items, ensuring they stay fresh and secure.

Machine Stretch Film

Stretch film is a flexible and durable packaging material used for securely wrapping and stabilizing palletized loads. It protects products during transportation and storage, providing an effective barrier against external factors such as moisture, dust, and dirt. With its high elasticity and adhesive surface, it tightly wraps materials while offering cost-effective usage. Widely preferred across various industries, stretch film provides a reliable and practical solution for logistics operations.

Greenhouse Films

Greenhouses offer an optimal growing environment for various types of plants, including vegetables, fruits, and flowers. These structures provide protection from external factors such as rain, wind, and cold, creating a stable environment that promotes faster plant growth. As a result, it is possible to harvest crops several times a year.

To ensure that the greenhouse cover is suitable for its intended use, including classical agriculture, landless agriculture, geothermal use, as well as the specific region, its properties such as sunlight resistance, thickness, and optional additives are carefully considered. Greenhouse covers are produced with varying resistance levels to sunlight, ranging from 3 to 60 months.

The additives used during the production phase are also essential in determining the properties of the greenhouse cover. These additives are selected based on the specific needs of the plants being grown and the environmental conditions in the region. Overall, the careful selection of these properties and additives is crucial in creating an optimal growing environment within a greenhouse.

Mulch Films

Mulch films are utilized to cover the specially cultivated soil in areas where fruits and vegetables are grown. They serve multiple purposes, including preventing weed growth and keeping produce clean by creating a barrier between the soil and the crops.

In addition to these benefits, mulch films also aid in preventing the spread of diseases caused by viruses and bacteria, regulating soil temperature, and promoting the rapid growth of fruits and vegetables. Our production methods are tailored to the specific needs and usage requirements of our customers.

Silage Films

Silage is an essential component in both dairy farming and fattening practices. It plays a crucial role in protecting and storing hay from external elements while also meeting the fresh feed needs of animals. Silage possesses unique features that make it an ideal solution for this purpose.

It is resistant to tearing and crushing, has a sealing feature, and maintains its properties during the silage process. Additionally, UV stabilizers are added to increase its durability and longevity. Silage films are available in various colors, including black, opaque white, and green, depending on individual needs and requirements.

Packing Tape

Packing tape is a durable adhesive tape commonly used in packaging, moving, and storage processes. It is ideal for sealing cardboard boxes, securing packages, and bundling items together. Typically made with a plastic or paper-based backing coated with a strong adhesive, it comes in various options such as clear, brown, colored, or printed designs to suit both functional and aesthetic needs. Waterproof and moisture-resistant variants are suitable for outdoor use. Packing tape provides a reliable seal for safe packaging while being easy to cut and apply, making it a practical solution for both personal and industrial purposes.

Garbage Bag

Garbage film, specially designed for the safe and hygienic collection of waste. This highly durable film is produced in various sizes and thicknesses, making it suitable for both household and industrial waste packaging. Its leak-proof structure prevents unpleasant odors and hygiene issues, while providing practical use. Manufactured with environmentally conscious production methods, the garbage film is made from recyclable materials, making it an ideal choice for sustainable waste management solutions.
